DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I in the reply filed on November 21, 2006 is acknowledged.

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9 and 10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Reiss (6,418,347). The device includes electrode 10, cable 14, and fastening means consisting of male element 32 having an orifice and female element 12 having a protuberance.

Claims 9-12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Le Brusque (WO 00/03760). Applicant's attention is directed to Figures 4 and 5. The device includes electrode 7, cable and fastening means consisting of male element 13' having an orifice 15 and female element 2 having a recess including a protuberance 21. As shown in Figure 5, the male includes the substantially frustoconically-shaped features detailed in the claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Le Brusque (WO 00/03760). Given the teaching of the reference, the particular angles would have been within the level of skill of the artisan to select to optimize performance of connection of the elements.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references disclose a similar device and the particular connector shape.
